

# Malvern Institute

70 Years of Addiction Treatment 1948-2018

## Malvern Institute's Medication Assisted Treatment

Malvern Institute helps individuals struggling with the disease of addiction using only evidence based treatment methods. Medication Assisted Treatment (MAT) is one approach utilized by our team of clinicians that has proven successful for many individuals when added to a 12 Step recovery program and other aftercare treatments.

Choosing Medication Assisted Treatment (MAT) is a shared decision between the clinician and patient, and the patient's family when appropriate.

Malvern Institute offers personalized treatment options including Suboxone and Vivitrol, which are both covered by most insurance plans. Individuals in these programs are more likely to remain in treatment.

### Our highly-structured program requires participants to meet the following criteria:

- Live in an environment supportive of MAT approach
- Continue outpatient treatment within Malvern system
- Be willing to submit to random urine drug screens
- Actively participate in a 12 Step program
- Complete all assignments given by counselor
- Understand that failure to abide by any of the above requirements, or test positive for other substances, may cause dismissal from the program

MAT treatment is available at both our inpatient campuses in **Malvern** and **Willow Grove**, as well as these outpatient locations:

1161 Lancaster Avenue  
Berwyn, PA, 19312

401 Kings Highway South, Bldg. 1  
Cherry Hill, NJ 08034

1566 Medical Drive, Suite 201  
Pottstown, PA 19464

4612 East Street Road  
Trevose, PA 19053

**Help is just a phone call away: 610-MALVERN**
